Show Services

Administration and coordination for all pre-event and on-site requirements to make running the show simple and efficient.

Pre-Show Planning + Logistics

Exhibit Installation Services Inc. has trained staff to help you coordinate the planning and logistics of the set up of any show or event you are putting on.

EIS staff create full working floor plans for every show to help you best take advantage of the square footage of the facility, market and sell your space and properly service your clients.

Friendly and knowledgeable EIS staff are also available to help service all exhibitor requirements from rental display accessories and systems to materials handling and move in assistance. We anticipate and address any complications before they happen to keep your exhibitors and attendees happy.

On-Site Products + Services

Trained installer crews are able to turn floor plans in to a trade show or special event while gauging the safety and functionality of any space.

A dedicated service desk at every show allows us to manage and distribute any requirements of show management or exhibitors at the event. EIS' vast inventory of display equipment allows us to meet the needs of every exhibitor on-site.

Aside from exhibitor booth requirements, EIS can help you with all other special event requirements such as staging, decorative fixtures, catering equipment, portable office systems and more.

An on-site installer will always be there for the duration of the install and for the show hours to ensure that the display equipment, electrical connections and storage areas are properly maintained.
